# Two laps around the globe? JATCO's AT & CVT surpasses 120 million units!

Cumulative production of JATCO's step AT and CVT is 100 million It has exceeded 20 million units.

As reported on JATCO's official Facebook page, JATCO's cumulative production of step ATs and CVTs (\* 1) exceeded 120 million units in April of this year! (At the end of the article, AT1, which was released in the past, In-house newsletter articles such as 10 million units and 10 million CVTs are also posted.)

Cumulative production since the production of the first step AT, 3-speed AT "3N71" for FR vehicles (Nissan: for "Datsun Sunny 1000") began in April 1967 at the Nissan Yoshihara Plant, one of the predecessor companies. The number of vehicles increased steadily to 10 million in 1990 and 50 million in 2005, reaching the 100 million mark in 2017. In just four years since then, we have reached 120 million units.

By the way, if you put 120 million step ATs and CVTs side by side, it will be about two laps of the earth. This truly global feat cannot be achieved by Japan alone. Live globally in Mexico, China, Thailand as well as Japan

## RANKING

Two laps around the earth? AT & CVT is 1 Over 120 million units

History of overseas base development

2 laps of the earth

With 120 million units traveling around the globe twice, JATCO's progress will never stop. Let's continue accelerating with the JATCO spirit in the coming electrification era and extend the earth to 3 laps and 4 laps.

Pine planted (Fuji 4 district) so that JATCO's electrification business will grow significantly

(\* 1) The figures include the production volume of step AT and CVT at the predecessor company (Nissan Yoshihara Plant, Japan Automatic Transmission).

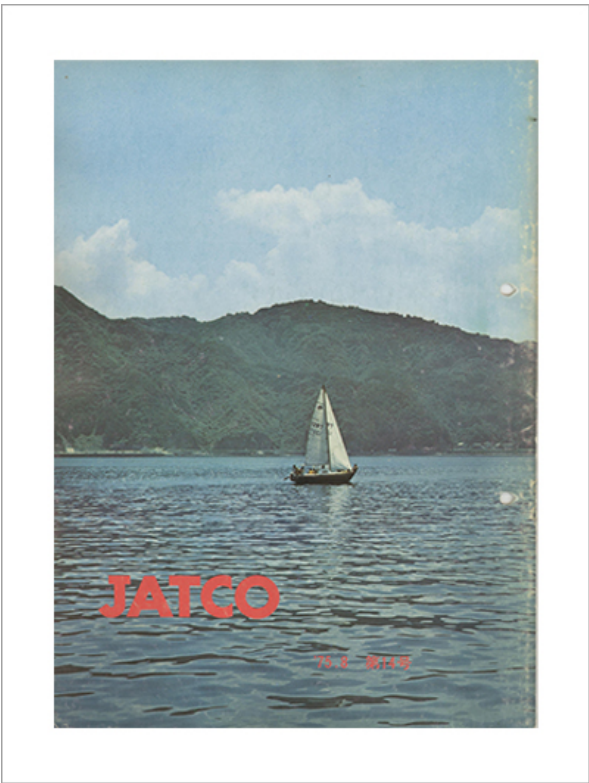

We will post an article celebrating past milestones. Please take a look. \* Click the title to see the PDF.
