Let's think about SDGs together! Self-diagnosis and goals of your SDGs degree 15

Commentary

How much do you feel about your own SDGs? At the individual level

There was a site that self-diagnosed the SDGs degree. If you answer honestly, you will be surprised

To the end. We will deliver it with the explanation of Goal 15 "Let's protect the richness of the land".

Self-diagnosis of SDGs degree

Learn the importance of SDGs in JATCO employees, work and workplaces, and practice in your own way

I think you are doing it. But what is your level of knowledge and efforts?

Or is it better to work harder or is it at a high enough level?

Do you not understand because it is not?

Therefore, we would like to introduce a website that will self-diagnose your SDGs degree.

SDGs online survey developed by the Japan Ethical Promotion Council. 50

If you click on the options for the question, your SDGs degree will be judged and you will be asked.

-Displayed as a dar chart and a bar chart. Radar chart is SDGs imagination

It shows how much "SDGs power" you have, such as power and SDGs information power.

vinegar. The bar chart shows your understanding of each of the 17 goals.

INFORMATION INFORMATION

<http://sdgs2030.jp/>

I will make a diagnosis immediately.

SDGsへの理解分布

The distribution has a surprisingly small area. SDGs action power is a single digit percentage. self

As an analysis, the ability to act and achieve is lower than the imagination and learning ability, that is, the SDGs

On the other hand, it became clear that he was a headache. Don't understand

It means that they are not acting, so do what you can do first.

I made up my mind.

What will your results be? I feel that children today have a higher degree of SDGs.
I can't do it. Self-diagnosis again one month later, at which time the area is expanding
I will act like this.

Goal 15 Let's protect the richness of the land

Protect the richness of the land, prevent desertification,

Let's use it carefully so that various creatures can live

Goal 15 is "Let's protect the richness of the land".

The abundance of land is quite wide, but it is especially mentioned in the SDGs.

What we are doing is protecting the forest and protecting the ecosystem.

It is said that 4.7 million hectares of forests are disappearing annually on the earth. Tokyo Dome

The cause of the disappearance of 1 million forests is due to desertification and climate change.

Acid rain, unplanned deforestation, and urbanization due to population growth. We as well as the sea

Is able to obtain wood, food, fuel, feed, etc. from the forest, but the forest is destroyed.

As the destruction makes it impossible to obtain these, the balance of biodiversity will also be destroyed.

increase.

40,000 species of organisms are extinct on the earth every year, which means that one species is extinct every 13 minutes.

It will be the calculation. Chimpanzees, hippo, African elephants, tigers, etc.

Only animals are on the verge of extinction. Extinct creatures will not return.

Currently, the number of deer is increasing explosively in Japan. Many deer eat the bark to make trees

Withered, and even eaten up undergrowth, and in some areas the richness of the mountains has been lost.

vinegar. There are various reasons why the number of deer has increased too much, but one is the natural enemy of deer.

It is said to be in extinction of wolf. In this way, the extinction of one species sometimes

It can be said that biodiversity conservation is important because it has a devastating impact on nature.

It is.

One of the things we can do is to separate and reduce waste and reduce daily energy.

There is CO2 reduction by. Acid rain by curbing climate change due to global warming
And delays desertification. In addition, the eco-label of the sea introduced in Goal 14
"FSC certification" is a proof of sustainable forest management, which is equivalent to "MSC certification".
I have. You may have seen it with children's toys.

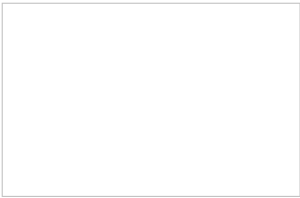

At JATCO, we are working to reduce paper, which will lead to a direct reduction in the use of forest resources.

In addition, we are making various efforts toward the realization of carbon neutrality.

We will protect forests through border conservation and contribute to the conservation of plant diversity.

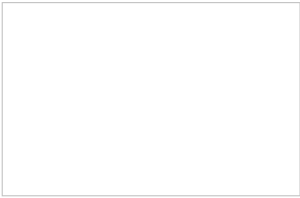

In Japan, local activities such as protecting satoyama and planting trees are being carried out. one step

Why don't you take a step forward and participate in local activities to protect the forest?
